## **DETAILED ACTION**

### ***Election/Restrictions***

Claims 2-10 remain withdrawn for the reasons set forth in Paper No. 7, 1<sup>st</sup> paragraph from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Claims 1-10 are pending and claim 1 is examined on merits.

### ***Claim Rejections - 35 USC § 112***

Rejection of claim 1 under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention, is **withdrawn** because applicant pointed out in Paper No.8 that the core protein of mucin is a polypeptide component with stripped away carbohydrates and polymorphic means allelic variations.

### ***Double Patenting***

Claim 1 remains rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,054,438 because applicant has not supplied the terminal disclaimer.

### ***New Grounds of Rejection***

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had **possession** of the claimed invention. Claim 1 is drawn to genus of

expression vector encoding mucin protein, made in human epithelial cells, binds to SM3. Clearly genus include a large number of unpredictable species comprising "polymorphic" due to allelic variance. However, the specification does not teach an expression vector encoding any full-length size protein. Therefore it is apparent that applicant was not in possession of even one species of genus claimed.

**Conclusion**

No claim is allowed.
